

API-Driven Integration & Automation

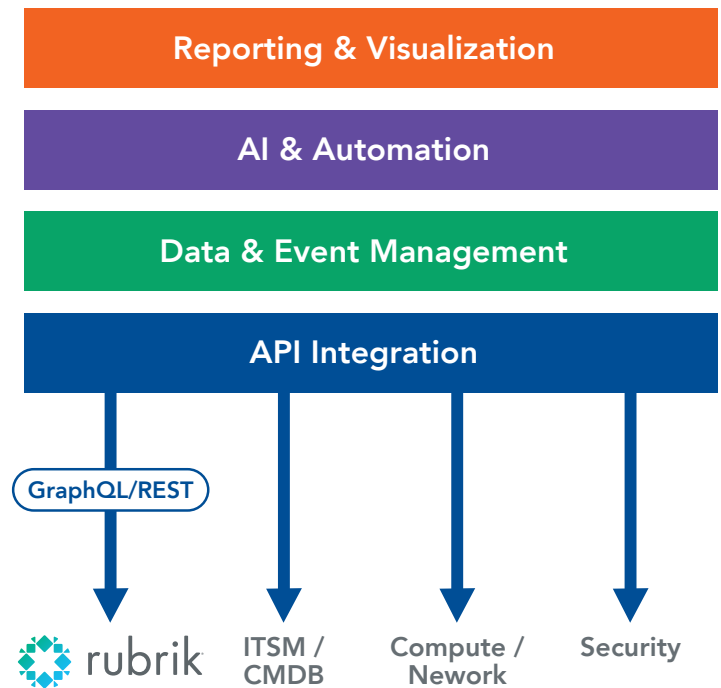

Extending the value of Rubrik's
Data Protection Platform

IT infrastructure operations are becoming increasingly complex due to the need for integration, automation and customization across various platforms.

Organizations must integrate legacy systems with modern technologies while ensuring robust cybersecurity measures. This multifaceted landscape necessitates skilled professionals who can manage and orchestrate the diverse components effectively.

At Verinext, we believe that it is critical to create an integrated environment to optimize your infrastructure operations. With its API-first architecture, Rubrik provides an easy and valuable interface to programmatically consume its platform services. Leveraging Rubrik's robust API ecosystem, we can help you interconnect to existing resources to optimize your investment in the Rubrik Platform.

We apply sophisticated data and application integration techniques to increase the operational cohesion across the IT solutions within your environment. Bringing together our experience with leading enterprise data & integration platforms, our capabilities for building and integrating robust APIs, and our extensive knowledge of the Rubrik platform, we are uniquely positioned to drive increased efficiency and overall value from your core IT infrastructure platforms, whether they are in the cloud or your own data center(s).

COMMON USE CASES

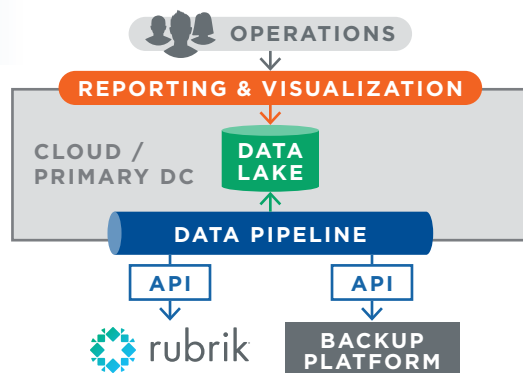

"Single Pane of Glass"

Description

Create dashboards and reports that allow for visibility across core IT infrastructure platforms.

Benefits

- ✓ Unified operations view across Rubrik and other infrastructure platforms
- ✓ Allow for common SLA metrics across platforms

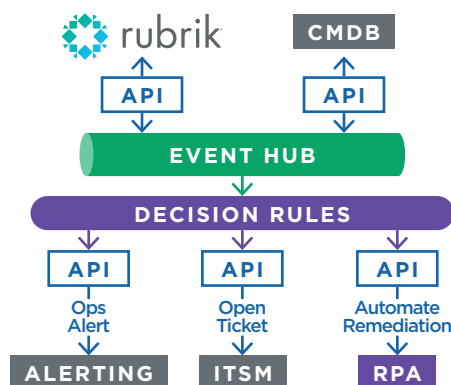

Asset Inventory Reconciliation

Description

Track assets across core IT infrastructure platforms to ensure inventory alignment for operational and compliance purposes.

Benefits

- ✓ Ensure common asset inventory between Rubrik and other platforms
- ✓ Support compliance processes

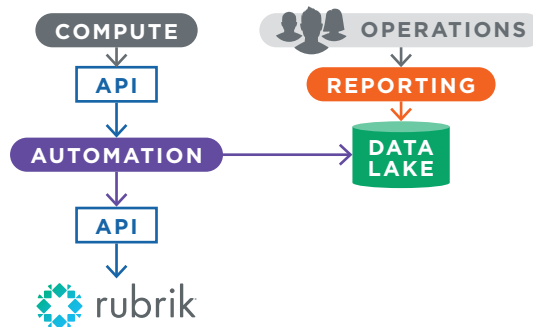

Automated Snapshot Creation

Description

Trigger automated process for Rubrik snapshot creation based on operational process triggers.

Benefits

- ✓ Enhance data protection and recovery processes to reduce human error
- ✓ Less risk of data loss and quicker recovery in case of issues

BUILD YOUR INTEGRATED INFRASTRUCTURE

The Rubrik API ecosystem provides a valuable interface to programmatically consume platform services and enable customers to integrate Rubrik across a number of existing enterprise tools and workflows. Forty8Fifty Labs can help you leverage the integration capabilities of the Rubrik platforms to create more cohesive environment to help streamline your operations and gain maximum value from your infrastructure platform investments.

Contact us today to discuss the integration opportunities in your environment.
